

Creative Brick has been in business since 1979, and is one of the oldest and largest brick paving firms in the Midwest. Our standard address stones are made with gray limestone blocks. We engrave all types of media including concrete and clay pavers, tile, granite, slate, glass, marble, glazed masonry units and corners – we invite you to inquire for your special needs.

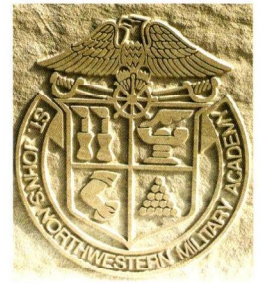

The engraved number or letter height for the address stone depends on the number of characters used; we always try to “fill” the block. We are ready to work with you to get the finished product you desire.

Recessed letters and numbers are sand blasted to a depth of approximately 1/2 inch. If you choose, we then paint the numbers and border with lithachrome black paint. Other paint colors are available, please call. The bed depth of the limestone blocks is approximately 2-1/4 inches. We can cut the bed depth to 1-1/2 inches for an additional fee. Our limestone address stones should be mortared into place.

We have many typestyles available and can engrave logos and other artwork. Prices are available upon request.

Gift Bricks®, number one in donor recognition items, is a wholly owned division of Creative Brick.
